Sparc Scalable Processor Architecture is the industry's only openly defined and evolved RISC architecture. Version 9 is the new 64-bit incarnation of Sparc, the most significant change since Sparc's introduction in 1987. Unlike other RISC reduced instruction set computer designs, Sparc specifies not a hardware implementation chip but an open standard architecture belonging to the community of Sparc vendors and users. The Sparc specification is defined by the Sparc Architecture Committee, a technical arm of the Computer Maker Consortium. Sparc International Version 9 provides 64-bit data and addressing support, fault tolerance, fast context switching, support for advanced compiler optimizations, efficient design for superscalar processors, and a clean structure for modern operating systems. The v9 architecture supplements rather than replaces the 32-bit version 8 architecture. The non-privileged features of version 9 are upward compatible from version 8, so 32-bit application software can execute natively without modification on version 9 systems. No special compatibility mode is required. Publication of the version 9 architecture marks a three-year development effort by Sparc International member companies from a broad cross-section of disciplines.
