the principle of the conventional activated sludge process for municipal wastewater treatment is primarily based on biological oxidation by which organic

matters are converted to biomass and carbon dioxide after more than 100 years successful application the cas process is receiving increasing critiques on its high energy consumption and excessive sludge generation currently almost all municipal wastewater treatment plants with the cas as a core process are being operated in an energy negative fashion to tackle such challenging situations there is a need to re examine the present wastewater treatment philosophy by developing and adopting novel process configurations and emerging technologies the solutions going forward should rely on the ways to improve direct energy recovery from wastewater while minimizing in plant energy consumption this book begins with a critical overview of the energy situation and challenges in current municipal wastewater treatment plants showing the necessity of the paradigm shift from removal to recovery in terms of energy and resource as such the concept of a b process is discussed in detail in the book it appears that various a b process configurations are able to provide possible engineering solutions in which a stage is primarily designed for cod capture with the aim for direct anaerobic treatment without producing excessive biosludge while b stage is designated for nitrogen removal making the wastewater treatment energy self sustainable is obviously of global significance and eventually may become a game changer for the global market of the municipal wastewater reclamation technology the principal audiences include practitioners professionals university researchers undergraduate and postgraduate students who are interested and specialized in municipal wastewater treatment and process design environmental engineering and environmental biotechnology

professors who are leading some of these advances have retired the authors all still active in the field are aware that cleaning dirty water has become more complex but that it is even more urgent now than 12 years ago and offer this second edition to help the young water professionals engage with the scientific and bioprocess engineering principles of wastewater treatment science and technology with deeper insight advanced knowledge and greater confidence built on stronger competence
