the essays reproduced in this volume analyze the guild system in byzantium and the west and investigate for the first time the process of price formation in byzantium innovative approaches are devised to fathom the conceptual basis institutional parameters market organization and structures and market dynamics which shaped price determination correlatively it is persuasively established that the byzantine guilds unlike their counterparts in the west did not fix prices through concerted action as they did not command the requisite market power or institutional support fundamentally these studies argue that the byzantine economy was market oriented as the state was quite circumspect in its interventions and pursued market based policies within a regulatory framework aimed to thwart unfair business practices protect the consumer curb the concentration of economic power and prevent the emergence of monopolistic market structures the competitive process and market mechanism were buttressed by a panoply of legal and other institutional arrangements aimed to frustrate anti competitive practices and ensure correct business conduct to maintain a level playing field even in guild organized sectors the authorities did not interfere with the firms decision making process relying on the dynamic interaction of market forces and letting the market mechanism take hold the long standing notion of a command and control economy is indefensible

the german banking system is characterized by high fragmentation low profitability and low

foreign ownership main reason for this is its particular structure that can best be described as forced segmentation this structure produces local banking markets the book argues that local bank competition is not as pronounced as national concentration ratios predict and presents a bank pricing study which indicates that local banks banks located in less densely populated areas and less productive banks tend to charge higher prices for retail bank services than banks that operate nationally these results as well as lessons drawn from international reforms suggest that the german banking system could benefit from cross pillar consolidation which promises to export competition from the national to local banking markets last but not least the book analyzes political economy implications of banking reforms and provides suggestions on status quo resolution by identifying ways to facilitate reform implementation in the german banking system

in his book marktform und gleichgewicht published initially in 1934 heinrich von stackelberg presented his groundbreaking leadership model of firm competition in a work of great originality and richness he described and analyzed a market situation in which the leader firm moves first and the follower firms then move sequentially this game theoretic model now widely known as stackelberg competition has had tremendous impact on the theory of the firm and economic analysis in general and has been applied to study decision making in various fields of business as the first translation of von stackelberg s book into english this volume makes his classic work available in its original form to an english speaking audience for the very first time

this book analyzes the implications of the trend toward increased seller concentration due to mergers and leveraged buyouts that have helped increase food firm stock prices 900 during the 1980s it is an essential reading for industrial organization economists and agricultural marketing economists
