during the second half of the twentieth century development in the asia  
pacific region has been dominated by industrialization however at the  
beginning of the twenty first century services in particular finance  
information and creative services have become deeply embedded in the  
processes of urban growth in asia pacific the rise of service industries  
has lead to national modernization programmes and globalization  
strategies services are also driving change in the internal form of city  
regions and are being actively deployed as instruments of metropolitan  
reconfiguration and land use changes these changes have created problems  
such as social polarization and the displacement of traditional  
industries and residential districts also there are tensions between  
local and global processes in the development of service industries and  
between the imperatives of competitive advantage and sustainable  
development service industries and asia pacific cities brings together a  
multi disciplinary team of experts to explore and illustrate the  
theoretical conceptual and practical issues arising from the  
transformation of asia pacific cities by service industries

the challenges for young people making the transition to adulthood are  
greater today than ever before globalization with its power to reach  
across national boundaries and into the smallest communities carries with

it the transformative power of new markets and new technology at the same time globalization brings with it new ideas and lifestyles that can conflict with traditional norms and values and while the economic benefits are potentially enormous the actual course of globalization has not been without its critics who charge that to date the gains have been very unevenly distributed generating a new set of problems associated with rising inequality and social polarization regardless of how the globalization debate is resolved it is clear that as broad global forces transform the world in which the next generation will live and work the choices that today's young people make or others make on their behalf will facilitate or constrain their success as adults traditional expectations regarding future employment prospects and life experiences are no longer valid growing up global examines how the transition to adulthood is changing in developing countries and what the implications of these changes might be for those responsible for designing youth policies and programs in particular those affecting adolescent reproductive health the report sets forth a framework that identifies criteria for successful transitions in the context of contemporary global changes for five key adult roles adult worker citizen and community participant spouse parent and household manager

this proceedings contains the papers of the fib symposium concrete innovations in materials design and structures which was held in may 2019 in kraków poland this annual symposium was co organised by the cracow university of technology the topics covered include analysis and design sustainability durability structures materials and prefabrication the fib *fédération internationale du béton* is a not for profit association formed by 45 national member groups and approximately 1000 corporate and individual members the fib's mission is to develop at an international level the study of scientific and practical matters capable of advancing the technical economic aesthetic and environmental performance of concrete construction the fib was formed in 1998 by the merger of the euro international committee for concrete the ceb and the international federation for prestressing the fip these predecessor organizations existed independently since 1953 and 1952 respectively

phobias are increasingly common amongst the general population sometimes resulting in a very significant social disability and burden for the family most cases remain undiagnosed and many of those which are diagnosed are treated inappropriately written by internationally renowned psychiatrist mario maj this book provides an update of research evidence and clinical experience concerning agoraphobia social phobia and specific phobias

high performance concrete brick masonry and environmental aspects constitutes volume 3 of the proceedings of the 6th international conference on fracture mechanics of concrete and concrete structures catania italy 17-22 june 2007 it is divided into four parts 1 high performance concrete 2 fiber reinforced concrete 3 brick masonry and other quasi brittle materials and 4 environmental issues concrete technology has developed at a fast pace during the last two decades and material performance has been significantly improved high performance concrete hpc is now a reality initially attention focused on compressive strength and the enhanced concrete was named high strength concrete hsc later however other issues arose such as workability and durability there was an increasing demand for enhanced rheology in terms of flowability and cohesion i.e. no segregation effects in the fresh state and compactness in the hardened state researchers responded with the development of self consolidating concrete scc since higher strength generally implies higher brittleness fibre reinforced concrete frc has generated considerable interest for its enhanced toughness under both

static and dynamic loading as well as for its ability to control concrete cracking nowadays there are many types of fibre on the market with different material and geometric qualities the remarkable toughness of frc due to its fracture energy combined with advances of nonlinear fracture mechanics in modelling the structural behaviour means that the advantages of incorporating fibres can be fully exploited furthermore by adopting optimized mix designs in terms of fibre content and type and of pozzolanic or hydraulically active adjuncts the increasingly important requirements of durability can be met even under the most severe environmental conditions like chemical aggression high and low temperatures and fatigue recently the field of fracture mechanics has extended to other brittle or quasi brittle materials such as brick masonry glass polymers and ice and a more realistic evaluation of the safety level of structures has been obtained the other two volumes comprising the proceedings of the 6th international conference on fracture mechanics of concrete and concrete structures are new trends in fracture mechanics of concrete and design assessment and retrofitting of rc structures this set presents a wealth of information and will be useful to professional civil engineers postgraduate students and researchers
